

Height Monitoring

- The APARMO and EUROCONTROL maintain the worldwide data bases for RVSM approved aircraft (MID EAST in process of establishment)
- Both organizations exchange aircraft data and, with some limitations, accept each others height monitoring data
- An aircraft successfully monitored in one region is generally accepted as RVSM compliant by the other

Height Monitoring

- Height Monitoring Unit (HMU) utilises geometric height measurement. Fixed ground stations are at LINZ, NATTENHEIM, GENEVA and STRUMBLE
- GPS Monitoring Unit (GMU) utilises portable GPS and computer equipment which is installed temporarily on aircraft for height monitoring purposes

Height Monitoring

- Only specific GMU contractors approved by APARMO and EUROCONTROL
- Monitoring window and fleet monitoring requirements
- Ongoing monitoring programme
